transistor) which has its gate terminal connected to a word line and its drain terminal connected to a bit line.

Klersy et al. (Patent Number: 5,933,365) discloses a thermal control means includes heating means for transferring heat energy into at least a portion of the volume of memory material. The heating means may be implemented by one or more heating layers. The heating layers are preferably thin-film structures. Preferably, at least one of the heating layers is deposited adjacent to the volume of memory material.
